EXECUTIVE SECURITY RISK GOVERNANCE DIAGNOSTIC™ / WORKED EXAMPLE

A Security Recommendation Awaiting Budget Approval

A worked example of the Executive Security Risk Governance Diagnostic™

CASE REFERENCE	SCOPE	CLASSIFICATION
EXAMPLE-001	**One live security risk and its associated business decision**	**UNDEFINED**

> *This worked example illustrates how the Diagnostic is applied. It is not based on an actual client case.*

01 / BUSINESS SITUATION

Business Situation

An organisation identifies a security risk that could disrupt operations or expose assets to loss. The security team recommends additional controls and submits the proposal for budget approval.

Management has not yet made a decision. The report describes the exposure and recommends action, but the available information does not clearly establish who has authority to accept the risk, approve the expenditure, or decide whether operations can continue while the risk remains.

02 / DIAGNOSTIC FINDING

Diagnostic Finding

The issue is not simply whether the proposed controls are technically sound. The question is whether the organisation has established who owns the decision and how that decision should be made, authorised, and recorded.

GOVERNANCE CLASSIFICATION	WHAT THIS MEANS
UNDEFINED	The available information does not establish a clear decision owner or an agreed route for authorising the response to this risk.

> **Interpretation boundary:** This classification is not proof that governance has failed. It identifies what the available information does not establish. Further evidence may clarify the roles and decision process.

03 / EXECUTIVE IMPLICATIONS

Executive Implications

If the decision owner and approval route remain unclear, the organisation may delay action, fund controls without resolving who accepts the remaining exposure, or allow operations to continue without an explicit risk decision.

A technically strong assessment can therefore leave management with an unresolved decision. The report may explain the threat, but it does not automatically establish who can approve the response or accept the residual risk.

> The practical question for management is: who is authorised to make this decision, against what criteria, and how will the decision be recorded and reviewed?

04 / RECOMMENDED NEXT STEP

Recommended Next Step

Confirm the decision owner, the person or forum authorised to approve the response, and the criteria for accepting or treating the remaining risk. Record the decision, its rationale, any conditions, and the date for review.

The security team should provide evidence and options. The appropriate business authority should make or formally approve the decision within the organisation's delegated authority.

DIAGNOSTIC SUMMARY

ITEM	WORKED EXAMPLE
Risk	A security exposure may disrupt operations or cause asset loss.
Decision required	Whether to fund controls, accept residual exposure, or restrict the activity.
Governance question	Who owns and authorises the decision?
Classification	UNDEFINED - the available information does not establish the decision arrangements.
Immediate priority	Clarify authority, decision criteria, documentation, and review responsibility.

EXECUTIVE SECURITY RISK GOVERNANCE DIAGNOSTIC™

A focused, self-guided examination of one live security risk and its associated business decision.

FIXED FEE	FORMAT	SCOPE
US$395	**Self-guided; immediate access after purchase**	**One live risk and its associated decision**

What the purchase includes

A governance classification, a statement of the principal governance condition, a governance observation, and the Risk Governance Decision Guide™.

Individual review by TopLink Security is not included in the fixed fee.

Ready to examine a security decision in your organisation?

Open the secure checkout to purchase the Executive Security Risk Governance Diagnostic™.

> **Purchase the Diagnostic - US$395**

This worked example is illustrative. The Diagnostic examines one live security risk and its associated decision; it does not replace the organisation's wider risk management process.
